10. Construction Activities
11. Food Supplies
12. Travel Guidelines

## 1) Web Application Designing and Development :

**Web development** is a broad term for the work involved in developing a web site for the Internet (World Wide Web) or an intranet (a private network). Web development can range from developing the simplest static single page of plain text to the most complex web-based internet applications (or just 'web apps') electronic businesses, and social network services. A more comprehensive list of tasks to which web development commonly refers, may include web engineering, web design, web content development, client liaison, client-side/server-side scripting, web server and network security configuration, and e-commerce development. Among web professionals, "web development" usually refers to the main non-design aspects of building web sites: writing markup and coding. Most recently Web development has come to mean the creation of content management systems or CMS. These CMS can be made from scratch, proprietary or open source. In broad terms the CMS acts as middleware between the database and the user through the browser. A principle benefit of a CMS is that it allows non-technical people to make changes to their web site without having technical knowledge.

## 2. Mobile Application Development:

**Android software development** is the process by which new applications are created for devices running the Android operating system. Google states that,<sup>[3]</sup> "Android apps can be written using Kotlin, Java, and C++ languages" using the Android software development kit (SDK), while using other languages is also possible. All non-JVM languages, such as Go (JavaScript, C, C++ or assembly), need the help of JVM language code, which may be supplied by tools, likely with restricted API support. Some languages/programming tools allow cross-platform app support, i.e. for both Android and IOS.

Third party tools, development environments and language support have also continued to evolve and expand since the initial SDK was released in 2008. In addition, with major business entities like Walmart, Amazon, Bank of America etc. eyeing to engage and sell through mobiles, and the mobile application development is witnessing a massive transformation.<sup>[4]</sup>

### 3. Animations:

**Animation** is a dynamic medium in which images or objects are manipulated to appear as moving images. In traditional animation, images are drawn or painted by hand on transparent celluloid sheets to be photographed and exhibited on film. Today most animations are made with computer-generated imagery (CGI).

Computer animation can be very detailed 3D animation, while 2D computer animation can be used for stylistic reasons, low bandwidth or faster real-time renderings. Other common animation methods apply a stop motion technique to two and three-dimensional objects like paper cutouts, puppets or clay figures. The stop motion technique where live actors are used as a frame-by-frame subject is known as pixilation.

#### 4. **Event Management:**

**Event management** is the application of project management to the creation and development of large-scale events such as festivals, conferences, ceremonies, weddings, formal parties, concerts, or conventions. It involves studying the brand, identifying its target audience, devising the event concept, and coordinating the technical aspects before actually launching the event.<sup>[1]</sup>

The process of planning and coordinating the event is usually referred to as **event planning** and which can include budgeting, scheduling, site selection, acquiring necessary permits, coordinating transportation and parking, arranging for speakers or entertainers, arranging decor, event security, catering, coordinating with third party vendors, and emergency plans. Each event is different in its nature so process of planning & execution of each event differs on basis of type of event.

## 5. **Business Services:**

There has been a long academic debate on what makes services different from goods. The historical perspective in the late-eighteen and early-nineteenth centuries focused on creation and possession of wealth. Classical economists contended that goods were objects of value over which ownership rights could be established and exchanged. Ownership implied tangible possession of an object that had been acquired through purchase, barter or gift from the producer or previous owner and was legally identifiable as the property of the current owner.

Adam Smith's book *The Wealth of Nations*, published in Great Britain in 1776, distinguished between the outputs of what he termed "productive" and "unproductive" labor. The former, he stated, produced goods that could be stored after production and subsequently exchanged for money or other items of value. The latter - however useful or necessary, created services that perished at the time of production and therefore did not contribute to wealth. Building on this theme, French economist Jean-Baptiste Say argued that production and consumption were inseparable in services, coining the term "immaterial products" to describe them.

## 6. Consulting Services:

A **consulting or consultancy firm** is a business of one or more experts (consultants) that provides professional advice to an individual or an organization for a fee.<sup>[1]</sup>

Consultancy firms target company executives and provide them with consultants, also known as industry-specific specialists and subject-matter experts, usually trained in management or business schools. The deliverable of a consultant is usually advice or a recipe to follow to achieve a company objective, leading to a company project.

More and more consulting firms are complementing the strategic deliverable by providing the means to implement the recommendations, either with the consultants themselves or by providing technicians and/or experts. This has opened up new markets for these companies. This is called outsourcing.

Consulting services are part of the tertiary sector and account for several hundred billion dollars in annual revenues. Between 2010 and 2015, the 10 largest consulting firms alone made 170 billion dollars growth revenue and the average annual growth rate is around 4%.

## 7. Marketing Functions:

Typical marketing function types within a larger business might **include** performing market research, producing a marketing plan, and product development, as well as strategically overseeing advertising, **promotion**, **distribution** for sale, customer service and public relations.

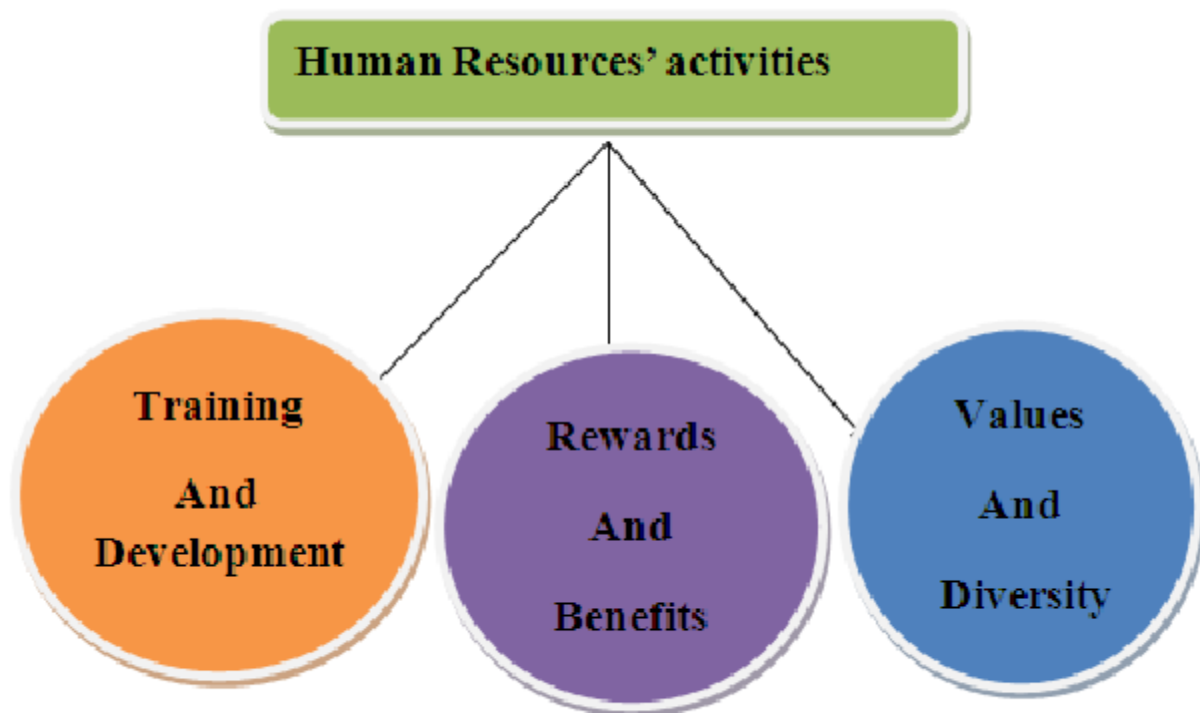

### 7 Functions of Marketing:

- Pricing. Setting and communicating the value of products and services. ...
- Product/Service Management. Designing, developing, maintaining, improving and acquiring products and services that meet consumer needs.
- Distribution. ...
- Financing. ...
- Marketing-Information Management. ...
- Selling. ...
- Promotion.

## 8. HR Activities:

**Human resource management (HRM or HR)** is the strategic approach to the effective management of organization workers so that they help the business gain a competitive advantage, Commonly referred to as the HR Department it is designed to maximize employee performance in service of an employer's strategic objectives, HR is primarily concerned with the management of people within organizations, focusing on policies and on systems. HR departments are responsible for overseeing employee-benefits design, employee recruitment, training and development, performance appraisal, and rewarding (e.g., managing pay and benefit systems). HR also concerns itself with organizational change and industrial relations, that is, the balancing of organizational practices with requirements arising from collective bargaining and from governmental laws.

Adopted from, Primark Stores Limited (2012).

## 9. E-commerce Solutions:

**E-commerce** is the activity of buying or selling of products on online services or over the Internet. Electronic commerce draws on technologies such as mobile commerce, electronic funds transfer, supply chain management, Internet marketing, online transaction processing, electronic data interchange (EDI), inventory management systems, and automated data collection systems.

Modern electronic commerce typically uses the World Wide Web for at least one part of the transaction's life cycle although it may also use other technologies such as e-mail. Typical e-commerce transactions include the purchase of online books (such as Amazon) and music purchases (music download in the form of digital distribution such as iTunes Store), and to a less extent, customized/personalized online liquor store inventory services.<sup>[1]</sup> There are three areas of e-commerce: online retailing, electric markets, and online auctions. E-commerce is supported by electronic business

## 10. Construction Activities:

**Construction** is the process of constructing a building or infrastructure. Construction differs from manufacturing in that manufacturing typically involves mass production of similar items without a designated purchaser, while construction typically takes place on location for a known client. Construction as an industry comprises six to nine percent of the gross domestic product of developed countries. Construction starts with planning, design, and financing; it continues until the project is built and ready for use.

Large-scale construction requires collaboration across multiple disciplines. A project manager normally manages the job, and a construction manager, design engineer, construction engineer or architect supervises it. Those involved with the design and execution must consider zoning requirements, environmental impact of the job, scheduling, budgeting, construction-site safety, availability and transportation of building materials, logistics, and inconvenience to the public caused by construction delays and bidding. Large construction projects are sometimes referred to as megaprojects.

## 11. Food Supplies:

**Food security** is a condition related to the supply of food, and individuals' access to it. There is evidence of being in use over 10,000 years ago, with central authorities in civilizations ancient China and ancient Egypt being known to release food from storage in times of famine.

At the 1974 World Food Conference the term "food security" was defined with an emphasis on supply. Food security, they said, is the "availability at all times of adequate, nourishing, diverse, balanced and moderate world food supplies of basic foodstuffs to sustain a steady expansion of food consumption and to offset fluctuations in production and prices". Later definitions added demand and access issues to the definition. The final report of the 1996 World Food Summit states that food security "exists when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life".

# CHEESE MAKING

## 12. Travel Guidelines:

A **guide book** or **travel guide** is "a book of information about a place designed for the use of visitors or tourists".<sup>[1]</sup> It will usually include information about sights, accommodation, restaurants, transportation, and activities. Maps of varying detail and historical and cultural information are often included. Different kinds of guide books exist, focusing on different aspects of travel, from adventure travel to relaxation, or aimed at travelers with different incomes, or focusing on sexual orientation or types of diet.

Travel guides can also take the form of travel websites.

## 11. Digital Marketing :

**Digital marketing** is the **marketing** of products or services using digital technologies, mainly on the **Internet**, but also including mobile phones, **display\_advertising**, and any other digital medium.

Digital marketing's development since the 1990s and 2000s has changed the way brands and businesses use technology for marketing. As digital platforms are increasingly incorporated into marketing plans and everyday life, and as people use digital devices instead of visiting physical shops, digital marketing campaigns are becoming more prevalent and efficient.

## 12. BPO Services :

**Business process outsourcing (BPO)** is defined as a subset of **outsourcing** that involves the contracting of the operations and responsibilities of a specific business process to a third-party service provider. Originally, this was associated with manufacturing firms, such as Coca-Cola that outsourced large segments of its supply chain.

BPO is typically categorized into back office outsourcing, which includes *internal business functions* such as human resources or finance and accounting, and front office outsourcing, which includes *customer-related services* such as contact center services.

BPO that is contracted outside a company's country is called offshore outsourcing. BPO that is contracted to a company's neighboring (or nearby) country is called nearshore outsourcing.

Often the business processes are information technology-based, and are referred to as **ITES-BPO**, where ITES stands for Information Technology Enabled Service. Knowledge process outsourcing (KPO) and legal process outsourcing (LPO) are some of the sub-segments of business process outsourcing industry

## WEB DEVELOPMENT:

## PORTFOLIO 4

COMPANY NAME: **GAP**

URL: <https://www.gap.com/>

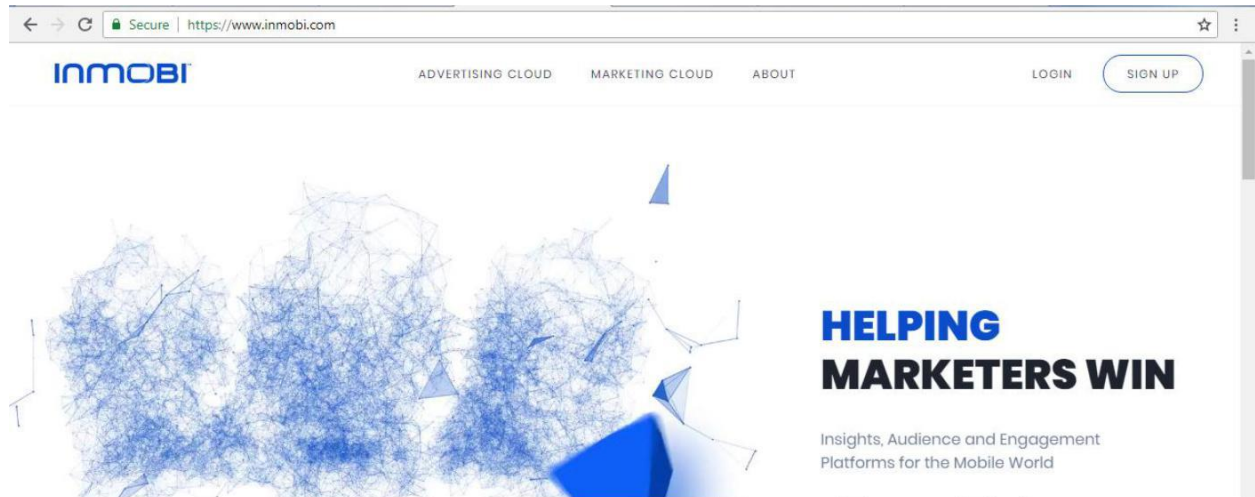

## BE THE WORLD'S FAVORITE FOR AMERICAN STYLE

Doris and Don Fisher opened the first Gap store in 1969 with a simple idea — to make it easier to find a pair of jeans and a commitment to do more. Over the last 46 years, the company has grown from a single store to a global fashion business with five brands — Gap, banana republic, Old Navy, Athlete and Intermix. Gap's clothes are available in 90 countries worldwide through 3,300 company-operated stores, almost 400 franchise stores, and e-commerce sites and are still growing.

## PORTFOLIO 5

COMPANY NAME: **Inmobi**

URL: <https://www.inmobi.com/>

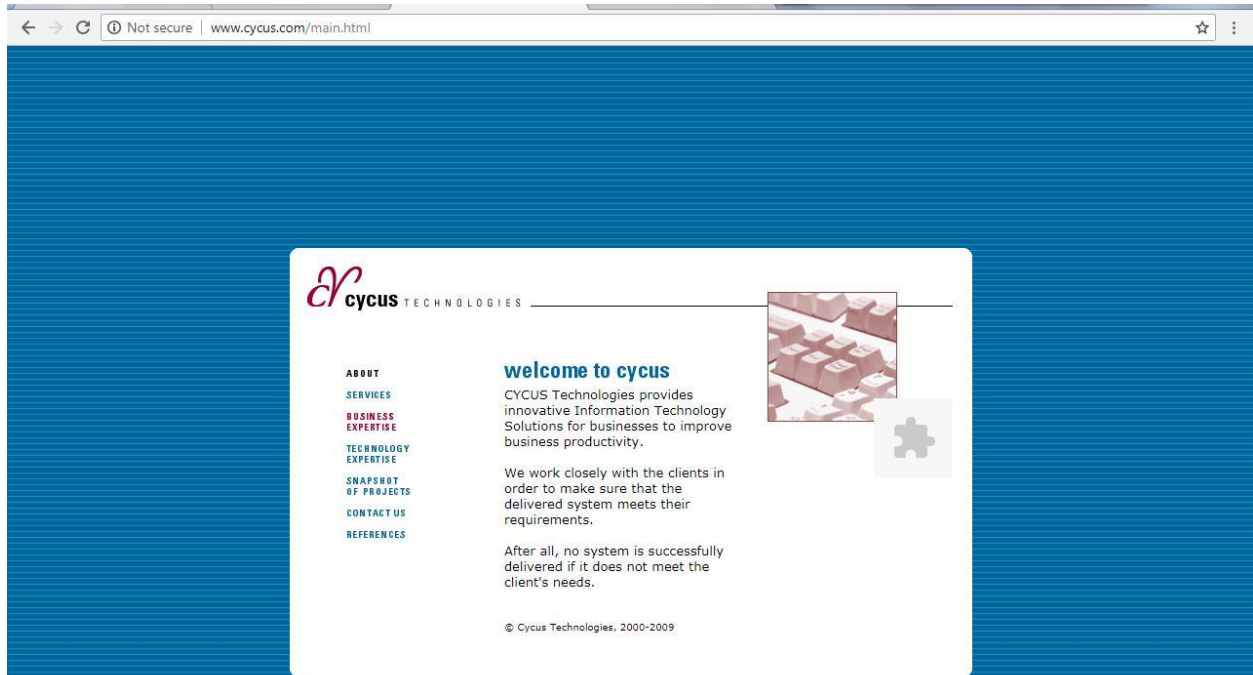

We are bold, unconventional & imaginative InMobi is a global provider of cloud based intelligent mobile platforms for enterprise marketers. As a leading technology company, InMobi has been recognized as a 2018 CNBC Disruptor 50 company and as Fast Company's 2018 Most Innovative Companies.

InMobi was conceptualized and born against all odds. A company based out of India tackling mobile in 2007 was no ordinary task. Venture Capital was hard to come by and investors frowned on internet companies from India. InMobi was founded in this opaque environment because its founders had foresight and the required passion to be able to disrupt an industry. Some of the world's greatest innovations are always met with hostility and InMobi was no different. This is our story – the story of how we built a tech powerhouse headquartered in India.

Hungerwala was inspired by the thought of providing a complete food ordering and delivery solution from the best neighborhood restaurants to the urban foodie. A single window for ordering from a wide range of restaurants, we have our own exclusive fleet of delivery personnel to pick up orders from restaurants and deliver it to customers. Having our own fleet gives us the flexibility to offer customers a no minimum order policy on any restaurant and accept online payments for all partner restaurants that we work with. Our delivery personnel carry one order at a time which ensures we get reliable and fast deliveries.

## PORTFOLIO 19

COMPANY NAME: **MEE MOBILEWALA**

URL: <http://meemobilewala.com/>

Virtually everyone is using smartphones and tablets. But maybe you've noticed that your mobile traffic tends to be pretty unimpressive. You need to appeal to your audience wherever they find you. So how do you get them to actually read your content on their smartphones and tablets?

The answer lies in writing that caters to the mobile experience. People reading content on mobile want straightforward answers and quick solutions, but they're going to be more willing to stick around and keep reading when the writing is conducive to the mobile experience.

# THANK YOU
